

This is a new [React Native](#) project, bootstrapped using [@react-native-community/cli](#).

Getting Started

Note: Make sure you have completed the [React Native - Environment Setup](#) instructions till "Creating a new application" step, before proceeding.

Step 1: Start the Metro Server

First, you will need to start **Metro**, the JavaScript *bundler* that ships *with* React Native.

To start Metro, run the following command from the *root* of your React Native project:

```
# using npm
npm start

# OR using Yarn
yarn start
```

Step 2: Start your Application

Let Metro Bundler run in its *own* terminal. Open a *new* terminal from the *root* of your React Native project. Run the following command to start your *Android* or *iOS* app:

For Android

```
# using npm
npm run android

# OR using Yarn
yarn android
```

For iOS

```
# using npm
npm run ios

# OR using Yarn
yarn ios
```

If everything is set up *correctly*, you should see your new app running in your *Android Emulator* or *iOS Simulator* shortly provided you have set up your emulator/simulator correctly.

This is one way to run your app — you can also run it directly from within Android Studio and Xcode respectively.

Step 3: Modifying your App

Now that you have successfully run the app, let's modify it.

1. Open `App.tsx` in your text editor of choice and edit some lines.
2. For **Android**: Press the `R` key twice or select **"Reload"** from the **Developer Menu** (`Ctrl` + `M`) (on Windows and Linux) or `Cmd` + `M` (on macOS)) to see your changes!

For **iOS**: Hit `Cmd` + `R` in your iOS Simulator to reload the app and see your changes!

Congratulations! 🎉

You've successfully run and modified your React Native App. 🐼

Now what?

- If you want to add this new React Native code to an existing application, check out the [Integration guide](#).
- If you're curious to learn more about React Native, check out the [Introduction to React Native](#).

Troubleshooting

If you can't get this to work, see the [Troubleshooting](#) page.

Learn More

To learn more about React Native, take a look at the following resources:

- [React Native Website](#) - learn more about React Native.
- [Getting Started](#) - an **overview** of React Native and how setup your environment.

- [Learn the Basics](#) - a **guided tour** of the React Native **basics**.
- [Blog](#) - read the latest official React Native **Blog** posts.
- [@facebook/react-native](#) - the Open Source; GitHub **repository** for React Native.
