

Final Pass Down storage subscription model from the underlying infrastructure costs. This allows FPD to manage the business operations and profit margins independently of fluctuating AWS bills.

Subscription Packages (Customer-Facing)

These tiers are structured for simplicity and perceived value, focusing on the needs of your users (family members accessing legacy data).

Tier Name	Storage Capacity	Monthly Retail Price	Best For...
Foundation	50 GB	\$9.99	Essential documents & photos
Family Archive	250 GB	\$24.99	Shared family history & media
Legacy Pro	1 TB	\$49.99	Extensive video & audio libraries
Legacy Vault	5 TB	\$129.99	Comprehensive digital estates

Infrastructure & Financial Model (Internal-Facing)

Use this table for your internal accounting. It reflects the raw cost of AWS S3 Standard storage (\$0.023/GB) and your target margin.

Tier Name	Wholesale Cost (AWS)	Target Margin	Retail Price
Foundation	\$1.15	~88%	\$9.99
Family Archive	\$5.75	~77%	\$24.99
Legacy Pro	\$23.00	~54%	\$49.99
Legacy Vault	\$115.00	~11%	\$129.99

*Note: The **Legacy Vault** margin is lower because it acts as a "Flagship" tier to attract high-value users; your operational goal is to upsell them into additional services or higher-value "Vital Clone" integrations.*

Overage and Sustainability Rules

To keep your *Final Pass Down* platform profitable and scalable:

- **Overage Policy:** If a customer exceeds their storage limit, apply an automated charge of **\$0.10 per GB** above the limit. This provides a clear path to profitability on high-usage accounts while discouraging "unlimited" abuse.
- **Request/Egress Handling:** These are variable costs. To prevent a single heavy user from eroding your margin, include a "Fair Usage Policy" in your Terms of Service that allows you to throttle or bill for extreme egress (data transfer out) exceeding 2x the storage volume per month.
- **The Wholesale Buffer:** Always keep a 20% "buffer" on your margins to account for API request fees (PUT/GET requests) and data transfer, which are not included in the baseline \$0.023/GB storage rate.

Strategy Recommendation

- **Lifecycle Transition:** Since you are building legacy platforms, you should eventually move "stagnant" files (data that hasn't been accessed in 90+ days) to **AWS S3 Glacier Instant Retrieval** (\$0.004/GB). This will drop your wholesale costs by over 80% for those files, significantly increasing your margins on long-term storage without impacting the user experience.
